routing technology

SAFETY

Observe the safety regulations in the instruction manual of the Power Tool to be used or connected to this attachment. Also observe any applicable additional safety rules. Read the following safety instructions before attempting to operate this product.

PLEASE KEEP THESE INSTRUCTIONS IN A SAFE PLACE.

The attention of UK users is drawn to The Provision and Use of Work Equipment Regulations 1998, and any subsequent amendments.

General

- Disconnect power tool, when not in use. Before servicing and when changing accessories such as cutters. Disconnect power tool and attachment from power supply. Ensure the machine is switched off before plugging tool in or connecting to a power supply.
- Always mount the power tool, accessory or attachment in conformity with the present instructions.
- Keep children and visitors away. Do not let children or visitors touch the tool, accessory or attachment. Keep children and visitors away from work area.
- Make the workshop child proof with padlock and master switch.
- Dress properly. Do not wear loose clothing or jewellery, they can be caught in moving parts. Rubber gloves and non-skid footwear is recommended when working outdoors. Wear protective hair covering to contain long hair.
- Consider working environment. Do not use the product in the rain or in a damp environment. Keep work area well lit. Do not use power tools near gasoline or flammable liquids. Keep workshop at a comfortable temperature so your hands are not cold.
- The accessory or attachment must be kept level and stable at all times.
- Keep work area clean. Cluttered workshops and benches can cause injuries
- Use the attachment with the power tools and accessories specified in this manual only. Do not force the tool or attachment to do a job for which it is not designed.
- Secure idle tools. When not in use, tools should be stored in a dry and high or locked up place, out of reach of children.
- For best control and safety use both hands on the power tool and attachment. Keep both hands away from cutting area. Always wait for the spindle and cutter to stop rotating before making any adjustments.
- Always keep guards in place and in good working order.
- Remove any nails, staples and other metal parts from the workpiece.
- Maintain tools and cutters with care. Keep cutters sharp and clean for better and safer performance. Do not use damaged cutters. Follow instructions for lubricating and changing accessories. Keep handles dry, clean and free from oil and grease.
- Maintain accessories. Do not use damaged accessories. Only use accessories recommended by the manufacturer.
- Check damaged parts. Before operation inspect the attachment, the power tool, the cable, extension cable and the plug carefully for signs of damage. Check for alignment of moving parts, binding, breakage, mounting and any other conditions that may effect its operation. Have any damage repaired by an Authorised Service Agent before using the tool or accessory.
- Do not use tool if switch does not turn it on or off. Have defective switches replaced by an Authorised Service Agent.
- Don't over reach. Keep proper footing and balance at all times.
- Don't abuse the cable. Never carry power tool or accessory by cord or pull it to disconnect from the socket. Keep cord from heat, oil and sharp edges. Always trail the power cord away from the work area.
- Connect dust extraction equipment. If devices are provided for the connection of dust extraction and collection facilities, ensure these are connected and properly used.
- Check all fixing and fastening nuts, bolts and screws before use to ensure they are tight and secure. Periodically check when machining over long periods.
- Stay alert. Watch what you are doing. Use common sense. Do not operate tools when you are tired, under the influence of drugs or alcohol.
- Personal Protective Equipment (PPE). All PPE must meet current UK and EU legislation.
- Do not leave tools running unattended. Do not leave tool until it comes to a complete stop.
- Always clamp workpiece being machined securely.

Routing Safety

- Disconnect router power tool. When not in use, before servicing and when changing accessories such as cutters, disconnect router and attachment from power supply.
- Ensure router cutter has stopped rotating before changing it. Never use the spindle lock as a brake.
- Remove adjusting keys and spanners. Form the habit of checking to see that keys and adjusting spanners are removed from the router tool, cutter and attachment before turning router on. Make sure cutter can rotate freely.
- Check all ball bearing and blade fixing screws before use to ensure they are tight and secure. Periodically check when machining over long periods.
- When using a template guide bush ensure it cannot come into contact with collet and nut.
- Noise. Take appropriate measures for the protection of hearing if the sound pressure of

- 85dB(A) is exceeded. Routing sound pressure may exceed 85dB(A), so ear protection must be worn.
- Eye protection. Wear safety goggles, spectacles or visors to protect the eyes from ejected waster particles.
 - Respiratory protection. Wear a face or dust mask, or powered respirator. Dust masks/filters should be changed regularly.
 - Do not switch router on with the cutter touching the workpiece.
 - The direction of routing must always be opposite to the cutter's direction of rotation.
 - After work, release the router plunge and allow spindle to stop rotating before putting machine down.
 - Check before cutting that there are no obstructions in the path of the router. When cutting through the full thickness of the workpiece, ensure there are no obstacles beneath workpiece, and that a sacrificial work surface is used.
- Additional Safety Rules For Router Cutters**
- Cutting tools are sharp. Care should be taken when handling them.
 - Always use cutters with a shank diameter corresponding to the size of the collet installed in your tool.
 - Always run router cutters at the spindle speed recommended and marked accordingly. Ensure cutter has reached correct speed before entering workpiece. Recommended speeds can be found on the packaging, in cutter instructions or in the Trend Routing Catalogue.
 - Always use router cutters in a router. Router cutters must not be used in a drill. Drill and boring bits must not be used in a router.
 - Never use cutters with a diameter exceeding the maximum diameter indicated in the technical data.
 - Do not drop cutters or knock them against hard objects. Do not use cutters that are damaged.
 - Cutters should be kept clean. Resin build up should be removed at regular intervals with Resin Cleaner[®]. The use of a dry lubricant (Trendicote[®] PTFE) will act as a preventative. Do not use PTFE spray on plastic parts.
 - Cutter shanks should be inserted into the collet to the mark line on the shank. This ensures that at least 3/4 of the shank length is held in the collet. Do not over-tighten the collet nut as this will score the shank and create a weakness and fracture point.
 - Observe the correct assembly instructions in the router instruction manual for fitting the collet and nut. Observe the router power tool manual instructions on fitting cutters correctly.
 - It is advisable to periodically check the collet and collet nut. A worn, distorted or damaged collet can cause vibration and damage the shank, and should be replaced. Worn collet nuts should be replaced.
 - Do not take deep cuts in one pass; take several shallow or light passes to reduce the side load applied to the cutter. Too deep a cut in one pass can stall the router.
 - Very small diameter cutters must be handled and used with care.
 - Always return cutter to its packaging after use.
 - Ensure a No-Volt Release Switch is fixed to or adjacent to the attachment and that it is used correctly.
 - Check the direction of the workpiece is always opposite to the cutter's direction of rotation.
 - Do not use awkward or uncomfortable hand positions.
 - Do not reach underneath table or put your hands or fingers at any time in the cutting path while tool is connected to a power supply.
- Useful Advice When Routing**
- Judge your feed rate by the sound of the motor.
 - Feed the router at a constant feed rate. Too slow a feed rate will result in burning.
 - Take many light passes rather than one deep cut to reduce the side load applied to both router and router cutter.
 - Trial cuts should be made on waste material before starting any project.
 - When using some attachments including a router table or dovetail jig, the use of a fine height adjuster is highly recommended.
 - When using a template guide bush, ensure there is sufficient clearance between cutter tip and inside each of bush. Ensure cutter and guide bush are concentric.
- Using Routers In A Fixed Position**
- After work, release the router plunge to protect the cutter.
 - Always use a push-stick or push-block for last 300mm of the cut.
 - Whenever possible use a work holding device or jig to secure component being machined.
 - Ensure attachment is securely fitted to the workbench, with table surface at approximately hip height.

ELECTRICAL SAFETY

Power Supply

Before any maintenance work, isolate mains plug from power source.

The electric motor has been designed for one voltage only. Always check that the power supply corresponds to the voltage on the rating plate. Machines marked for 230 volt can also be operated from a 220 volt supply.

The vacuum cleaner is supplied from the factory with mains supply cable which has an earthed plug. It must only be connected to an approved earthed socket.

Mains Plug Replacement (UK & Ireland only)

Always check the condition of the cable and plug before starting with your work. Should your mains plug need replacing and you are competent to do this, proceed as instructed below. If you are in doubt, contact an authorised Trend Repair Agent or a qualified electrician.

- Disconnect the plug from the supply.
- Cut off the plug and dispose of it safely; a plug with bared copper conductors is dangerous if engaged in a live socket outlet.
- Only fit 13 Amperes BS 1363A approved plugs fitted with a 13 Amp A.S.T.A approved BS 1362 fuse (1).

- The cable wire colours, or a letter, will be marked at the connection points of most good quality plugs. Attach the wires to their respective points in the plug (see below left). Brown is for Live (L) (2), Blue is for Neutral (N) (3) and Green/Yellow is for earth (4).

- Before replacing the top cover of the mains plug ensure that the cable restraint (5) is holding the outer sheath of the cable firmly and that the two leads are correctly fixed at the terminal screws.

For 115V units with a power exceeding 1500w, we recommend to fit a plug to BS4343 standard.

Never use a light socket. Never connect the live (L) or neutral (N) wires to the earth pin marked E or \perp .

Using an Extension Cable

- If an extension cable is required, use an approved triple core extension cable suitable for the power input of this tool (see technical data). The minimal conductor size is 1.5mm².
- When using a cable reel, always unwind the cable completely.
- Also refer to the table below.

Cable Rating (Amperes)

Cable Length (m)	Voltage	
	110V	230V
7.5	15A	6A
15	15A	6A
25	20A	6A
30	25A	6A
45	25A	10A
60	25A	15A

Conductor size (mm ²)	Cable rating (Amperes)
0.75	6
1.00	10
1.50	15
2.50	20
4.00	25

VACUUM CLEANING SAFETY

General Safety

Fire and explosion hazard.

- Never vacuum-clean inflammable fluids, such as gas, oil, alcohol, solvents, etc. Do not work near inflammable fluids or gas. Never vacuum-clean warm fluids or material at more than 60°C, such as burning cigarettes, ashes, glowing coals, etc.

Do not vacuum hazardous substances.

- Do not pull the cable and do not damage the isolation of the cable. When faulty, the cable must be replaced immediately.
- Always keep the cartridge filter clean.

Fire and explosion hazard.

Do Not Vacuum:

- Hot materials (glowing cigarettes, hot ashes, etc.)
- Inflammable, explosive or aggressive fluids (e.g. petrol, solvents, acids, alkalines, etc.)
- Inflammable, explosive dusts (e.g. magnesium or aluminium dust, etc.).
- Always trail the cable away from the working area.

General Safety Regulations when Routing

Noise

The level of noise when routing may exceed 85 dB(A). It is therefore advisable to wear ear defenders especially if routing for long periods of time.

Eye Protection

Goggles, safety spectacles or visors should be worn to protect the eyes from ejected waste particles.

Dust Protection

The fine dust created when routing presents a severe health risk if it is inhaled. Always wear a dust protection mask or respirator and use the dust spout connected to the T30A/T30AF extractor. Dust masks should be changed regularly.

MANUFACTURERS DECLARATION

We declare under our sole responsibility that this product is in conformity with the following standards of standardised documents:

EN 60335.1, EN 60335.2.2, EN 50081.1, EN 50082.1 in accordance with the directive 98/37/EC and following modifications 73/23/EEC, 93/68/EEC, 89/336/EEC.

INFORMATION ON NOISE/VIBRATION

The noise level when working can exceed 85 dB(A).
Wear ear protection!

Trend Machinery & Cutting Tools Ltd.

ITEMS ENCLOSED

- 1 x Cartridge Filter (12 micron for T30A)
(0.3 micron for T30AF & T30ALF)
- 5 x Castors
- 1 x Paper Filter Bag
- 1 x Hose 5m x 36mm Ø with Spout
- 2 x Extension Tubes
- 1 x Universal Spout
- 1 x Spout for Carpets
- 1 x Spout for Floors
- 1 x Spout for Fluids
- 1 x Power Tool Adaptor
- 1 x Crevice Tool
- 1 x Upholstery Tool
- 1 x Manual
- 1 x Guarantee Card

Also for the T30AF & T30ALF

- 1 x Nylon Pre-Filter

For extraction of fine dust particles the 0.3 micron cartridge filter must be used with the nylon pre-filter and paper filter bag.

CARTRIDGE FILTER COLOURS			
Filter Size	Outer Colour	Inner Colour	Mesh
12 Micron	Yellow	Yellow	Diamond
0.3 Micron	Yellow	White	Round

110 Volt unit accepts tools up to 1000 watts only.

DESCRIPTION OF PARTS

- ① Switch ON-OFF
- ② Socket for auto-start
230V max. 2000 W safe load
110V max. 1000 W safe load

- ③ Switch AUTOMATIC:
Position M: vacuum cleaner running
Position A: vacuum cleaner automatically starts when the accessories attached to plug are activated.

- ④ Carrying handle
- ⑤ Motor filter
- ⑥ Float
- ⑦ Cartridge filter
-for T30A & T30/EURO (12 micron)
-for T30AF & T30ALF (0.3 micron)

- ⑧ Paper-filter bag
- ⑨ Container
- ⑩ Cartridge filter cap
- ⑪ Container catch
- ⑫ Bumper
- ⑬ Castors
- ⑭ Hose release button

- ⑮ Cloth filter (optional) - for T30AF & T30ALF
nylon pre-filter is supplied as standard

- ⑯ Hose 5m x 36mmØ

- ⑰ Extension tubes

- ⑱ Universal spout: **a** for carpets
b for floors
c for fluids

- ⑲ Crevice tool

- ⑳ Upholstery tool

- ㉑ Power tool adaptor

ASSEMBLY

Some of the accessories are supplied inside the container and so must be removed before using the unit.

- Insert the five castor wheels in their purposely provided housings under the container (9).
- Connect the hose to container (9). To remove it, push button (14) and pull the hose towards you.
- The connection of the extension tubes and of its accessories is carried out by exerting a small amount of pressure. To remove them, turn the parts in the opposite direction and draw them apart.
- To use the universal spout (18), follow these instructions for:
 - Carpet - without bristles (18a)
 - Floor - with bristles (18b)
 - Fluids - with rubber strip (18c)

OPERATION

Suction of Dry Dust and Dirt

- The filter cartridge (7) has to be completely pushed in and is secured by turning the filter cartridge cap (10). Check that it fits correctly.
- In order to remove the cartridge filter (7) turn the cap (10) anti-clockwise and draw the cartridge filter. Fix the paper-filter bag (8) to the inner side of the tube-connection in the container, ensuring it is fully seated. When using the paper-filter bag the dirt can be removed more hygienically and the life-endurance of the cartridge filter will be extended. The paper-filter bag (8) should never replace the cartridge filter, however the 12 micron cartridge filter can be used without the paper-filter bag. The 0.3 micron cartridge filter should always be used with a paper filter bag.

If suction pressure decreases, replace the paper-filter bag with a new one. From time to time the cartridge filter (7) should be cleaned with a soft brush, ensuring longer life and at the same time higher performance.

When vacuum cleaning dry material, always use a cartridge filter, otherwise it could damage the motor.

7

10

7

10

8

8

Suction of Fluids

Before picking up fluids, do not forget to:

- empty container (9)
- remove paper-filter bag (8)
- remove cartridge filter (7)

Should the cartridge filter not be removed by mistake this could lead to motor damage. In order to guarantee enough air flow it is recommended not to immerse it completely in the fluids. When the fluids have reached the highest permitted level in the container, the float regulator (6) automatically blocks the suction and the motor pitch will change: switch off the vacuum cleaner IMMEDIATELY, pull out the plug, remove the suction head from the container and empty the container.

MAINTENANCE

- After every use empty container (dirt, dust and fluids). Never leave fluids in the tank, these could damage the filters and container in the course of time.
- After having picked-up fluids, dry the extension tubes, hose and motor-parts by running the vacuum-cleaner for a few minutes, having emptied the container. Always keep a reserve of paper-filter bags and cartridge filters, so that the vacuum cleaner is always ready for use.

Before plugging in your extractor, make sure that the power switch of your power tool has been **TURNED OFF** to avoid its accidental starting. Remember the power tool socket is always live when your extractor is plugged in.

RECYCLING

Machine, accessories and packaging should be sorted for environmentally friendly recycling.

GUARANTEE

The machine carries a manufacturers guarantee in accordance with the conditions on the enclosed guarantee card.

For the location of your nearest Trend Service Agent, please call the telephone number at the back of this manual.
